| 4. Changed enumerations.....                          | 3 |
| 5. Changed documentation/tooling (ecoc website) ..... | 4 |

## 1. Version history

| Date       | Version | Status | Comments                                                                                                                                                   |
|------------|---------|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2026-02-26 | 1.0     | Final  | As discussed and agreed during TopicGroup XII meeting 26 <sup>th</sup> February 2026 a few minor changes were accepted to correct the current 2.0 version. |

## 2. Correction

TestWltpCO2Group

A typo with a capital letter has been corrected:

TestWltpCo2Group in stead of TestWltpCO2Group

## 3. New enumerations

**Field** ExhaustEmissionLevelEuro

Change enumeration Add new code to enumeration: Euro VI E+

## 4. Changed enumerations

**Field** TyreTypeCode

Change enumeration to TyreType to types mentioned in the relevant regulations, and remove codes with have no relation to this regulations:

| Code  | Description                   | XSD                         | Official | Unofficial |                                                                                                                                                      |
|-------|-------------------------------|-----------------------------|----------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| AT    | All terrain                   | Remove enumeration          | x        |            | not a regulatory classification                                                                                                                      |
| AL    | Airless tyre                  | Remove enumeration          | x        |            | not a regulatory classification                                                                                                                      |
| AS    | All Season                    | Remove enumeration          | x        |            | not a regulatory classification                                                                                                                      |
| HLC   | High load capacity            | Change enumeration to HL    |          |            | E-regulation 30: "optionally the letters "HL" in front of the nominal section width in the case of Extra Load tyres."                                |
| MC    | Motorcycle tyre               |                             | x        |            |                                                                                                                                                      |
| MS    | M+S tyre                      |                             | x        |            |                                                                                                                                                      |
| RF    | Reinforced                    | Change enumeration to Reinf | x        |            | The inscription "REINFORCED" (or alternatively "EXTRA LOAD") if the tyre is classified as reinforced                                                 |
| RF    | Runflat tyre                  | Add enumeration             |          |            | E-regulation 30: "on run flat or self-supporting tyres, the letters "RF" placed in front of the rim diameter marking (for example, "235/45 RF 17"    |
| S     | Studded tyre                  | Remove enumeration          |          | x          |                                                                                                                                                      |
| XL    | Extra load                    |                             |          |            | This is a bit tricky, because the abbreviation XL does not formally exist in the regulations, but it is widely used in tyres to indicate extra load. |
| MST   | Multi Service Tyre            |                             | x        |            | A marking that may be used on motorcycle tyres.                                                                                                      |
| 3PMSF | Three-Peak Mountain Snowflake |                             |          | x          | EU 2020/740                                                                                                                                          |
| IGS   | Ice Grip Symbol               | Remove enumeration          |          | x          | not a regulatory classification                                                                                                                      |
| PAX   | PAX Runflat tyre              | Remove enumeration          |          | x          | not a regulatory classification PAX refers to Michelin's own designation for their run flat tyres                                                    |

**New codes:**

|       |                    |
|-------|--------------------|
| HL    | High load capacity |
| MC    | Motorcycle tyre    |
| MS    | M+S tyre           |
| REINF | Reinforced         |
| RF    | Runflat tyre       |
| MST   | Multi Service Tyre |

## 5. Changed documentation/tooling (ecoc website)

1. Tool ICM contentcheck available with changed XSD and available via the ecoc website
2. Example eCoC's updated with tag: TestWltpCo2Group in stead of TestWltpCO2Group
  - M1-05 -Toyota - Rav4\_M1\_Hybrid\_Petrol\_COC\_Specimen
  - M1-04 -Toyota - Prius\_M1\_Plugin\_COC\_Specimen
  - M1-02 -Toyota - C-HR M1-Specimen
3. eCoC IVI setup Manual v1.4 documentation updated with more information on mechanical couplings.
4. New version 2.0 XSD published, dated: 2026-02-26
  - ExhaustEmissionLevel: Euro VI E+ added
  - TyreTypeCode enumeration changed to:

|       |                    |
|-------|--------------------|
| HL    | High load capacity |
| MC    | Motorcycle tyre    |
| MS    | M+S tyre           |
| REINF | Reinforced         |
| RF    | Runflat tyre       |
| MST   | Multi Service Tyre |
  - Tagname TestWltpCO2Group changed to TestWltpCo2Group
5. New version of IVI 2.0 - Messagebook Excelformat - V2.4 published
6. New version of IVI 2.0 - Overview transition From IVI 1.11To2.0 - v2.2 published with new translation for TyreTypes
7. New version of ConversionTool published with new translation of TyreTypes
8. New version of IVI 2.0 - ICM Checking Module - v2.3 documentation published with:
  - a. Changes XSD
  - b. More information on field indicators (RuleDescription)
  - c. Each field has a value stated which makes reading easier
  - d. Short HowToUse information
  - e. VersionInformation
