

README

INITIAL VEHICLE INFORMATION 2.0

NEW EUROPEAN REGULATIONS

The Initial Vehicle Information (IVI) format is now a common format for exchanging vehicle data in several Member States. This has also been laid down in EU regulations. The European Regulation 2018/858, and the accompanying Implementing Regulations 2021/133 and 2024/1061, include various requirements relating to the eCoC. These regulations can be viewed via the website: <https://eur-lex.europa.eu/>

With the obligation to provide the eCoC's in digital format, the IVI (vehicle) message has been re-examined within the EREG in cooperation with the manufacturers. Various optimizations have been implemented that have an impact on application of the data.

OVERVIEW OF THE MOST IMPORTANT CHANGES

OBLIGATION TO USE ECOC

EU Regulation 2018/858 makes the use of an eCoC mandatory as of 5th July 2026. A paper CoC is no longer an obligation from that date onwards, but can still be requested in exceptional cases. The obligation to provide an eCoC does not apply to the European and National small series vehicles.

Within the EREG, it has been decided that the rule that an eCoC is provided in the new format for vehicles produced from 5 July 2026 also applies to the categories that fall under the 168/2013 and 167/2013 vehicle categories. However, under these guidelines, an eCoC is not mandatory, here paper is still allowed in all cases.

As a result, if a digital format is used, these eCvOs must be converted to version 2.0 and must meet the requirements set for version 2.0. This also applies to the signing of the eCoC file.

OBLIGATION TO SIGN DIGITALLY

From 5th July 2026, the obligation to sign the eCoC XML message will take effect. Without digital signing, the messages will no longer be processed. This means that this obligation takes effect as soon as an IVI version 2.0 is applied by a manufacturer. Regardless of the framework directive.

It is important that the party who signs the file must always be the Manufacturer or EU representative as indicated in the Type Approval.

The signature must then meet the requirements as set out in REGULATION (EU) No 910/2014, which means that it must be signed in accordance with the eIDAS standard. It has been decided that an Advanced certificate is sufficient for signing. A Qualified certificate which meets this standard is also allowed.

More information about eIDAS and providers can be found here: [eIDAS Dashboard \(europa.eu\)](https://eidas.europa.eu/)

CHANGES TO ECOC DATA

The current IVI message has been developed in 2016 and contains data that is no longer current. Several corrections have also been made since version 1.0 and it has been established that structural changes are also needed. With the new regulations coming into force, it has been decided to also look at the structure and adjust it where necessary. As a result, the message is no longer "backwards compatible" as has been the case so far.

The most important changes at a glance:

1. The new message version 2.0 only contains the CoC data.
2. The design of the data groups is set up, as much as possible, in accordance with EU regulations.
3. The national and technical data group have been removed.
4. The naming and layout of the attributes in the message have been adjusted in accordance with EU regulations.
5. In some cases, data has changed its definition (length, etc.).
6. In some cases, data has been placed on a different level (e.g. from fuel to vehicle and vice versa).
7. In some cases enumerations have been changed.

Documentation:

IVI 2.0 Change Overview v1.0

Document describing the changes made in addition to the "IVI 2.0 Overview transition From IVI 1.10-To-2.0 v1.0".

IVI 2.0 Guidelines Initial Vehicle Information v1.0

Overview of the guidelines on how to deal with the new version. These will be described in more detail in a user manual.

IVI 2.0 Overview transition From IVI 1.10-To-2.0 v1.0

All changes in an excel overview and a description of the link between IVI version 1.x and version 2.0.

IVI 2.0 Initial Vehicle Information XSD Scheme

The new XSD version 2.0 XSD file.

IVI 2.0 Draft ICM Checking Module - version 0.9

First draft with proposals for expansion of the ICM control module.

TIMELINES

Changes have been made to the timelines for setting up the message book and the ICM. These take more time than initially expected.

Date	Activity	Comments
January 2025	Documentation published	ChangeOverview IVI 2.0 v.1.0 Guidelines Initial Vehicle Information Version 2.0 v1.0 Overview transition From IVI 1.10-To-2.0 v1.0 Initialvehicleinformation2.0.xsd
11 th May 2025	Finish version 2.0 IVI	Publication of final version of IVI 2.0 and documentation.
11 th May 2025	Publication first draft ICM checks excel overview	Excel overview with checks for IVI 2.0.
15 th July 2025	Finish new version ICM	The version will contain more rules than the previous version. It will also be published as a cloud solution for everyone to use . In this way, manufacturers can check eCoC files in advance.
15 st July 2025	Finish messagebook	Delivering the first version of the new message book.
1 st September 2025	Using IVI version 2.0	Possibility for manufacturers to already switch to version 2.0. This is not yet an obligation. It must be possible for member states to be able to handle the new version.

Date	Activity	Comments
5 th July 2026	Mandatory use of eCoC	Mandatory use of IVI version 2.0 for all vehicles manufactured after 5 July 2026. This applies to all manufacturers who supply a digital CoC.
5 th July 2026	Publication of eCoC	Mandatory access to eCoCs for the public.

MORE INFORMATION OR QUESTIONS?

For more information or questions about the timelines or use of the IVI message version 2.0, please contact the Member State to which you already provide eCoC's.
